

Electronic invoicing

TecInvoice

A fully digitized and automated alternative to the existing paper-based process for preparing and processing invoices is now available.

Process:

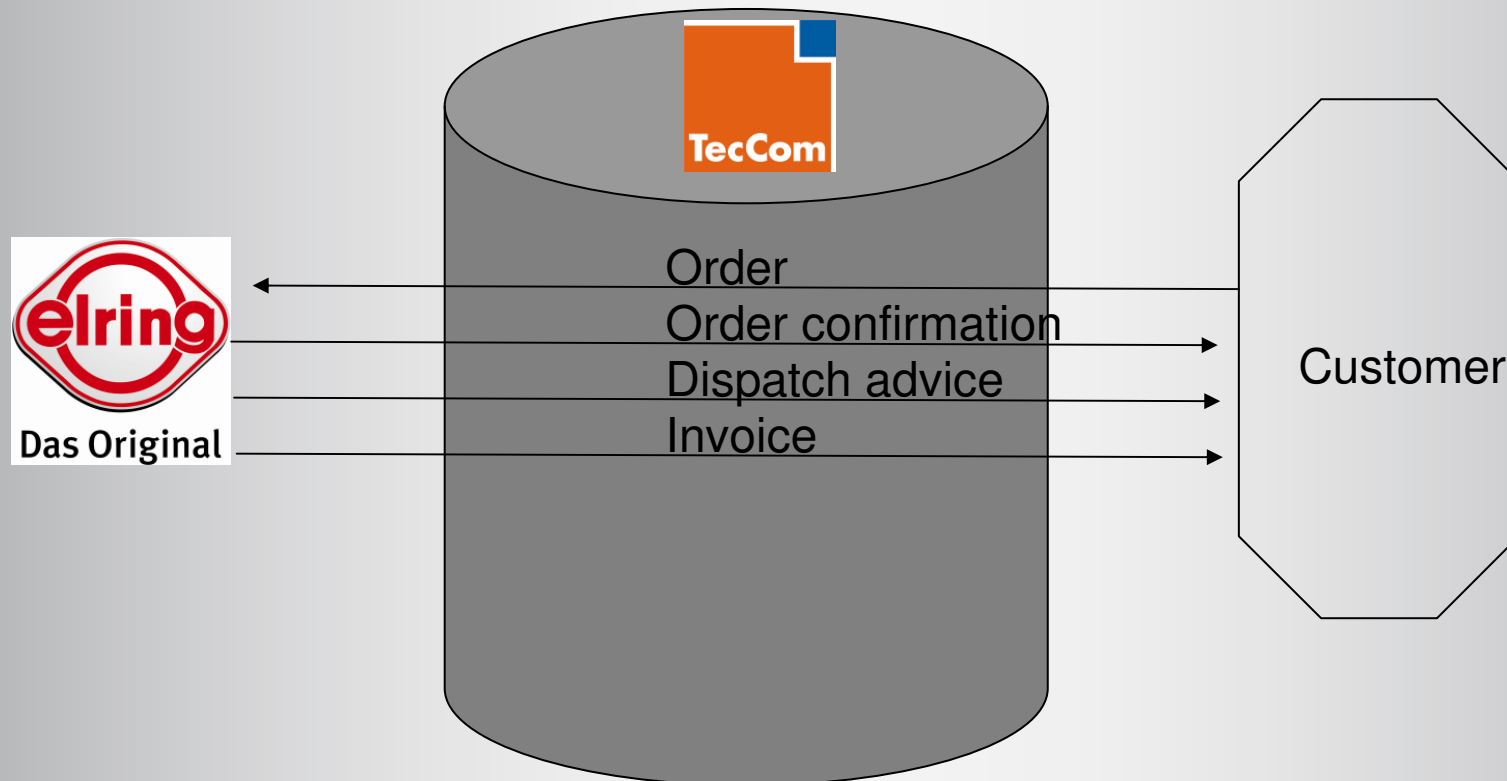

Important:

a connection to TecCom is not necessary. Depending on the invoice recipient's requirements, invoices can be delivered:

- Via e-mail
- Via the TecCom electronic invoice portal/archive
- Directly into your merchandise management system

TecOrder-Process

Useful points to note:

- Invoices are delivered by e-mail or via a web service interface.
- The invoice issuer is uniquely identified by a qualified signature. This guarantees the validity of the invoice's origin and its authenticity. The supplied verification report eliminates the recipient's obligation to check the signature directly.
- In the case of electronic invoicing, the invoice itself must be stored as a digital file along with the signature and verification report. The file must be digitally retrievable during the mandatory storage period and be archived in an audit-compliant manner.

Advantages:

- You can receive electronic invoices at no cost.
- Costs of paper hard copies are eliminated.
- You save time because invoices do not need to be verified and digitized by the invoice recipient.
- Archiving solution with a digital archive service from TecCom.
- Lower costs thanks to reduction of the paper archive.
