

Customised single seals – the perfect solution for the most stringent demands.

When it comes to the repair of racing, tuning and vintage car engines, you can trust the reliable original equipment quality of Elring gaskets. We offer you customised solutions for the most specific performance requirements.

In addition to the classic metal/soft material and MLS cylinder head gaskets, we also produce specialised gaskets such as water pumps and intake and exhaust gaskets upon request. The primary gaskets used here are the soft material and metal/soft material head gaskets.

Our customised individual seals can be used to turn a standard MLS cylinder head gasket into a personalised solution. Elring is able to enlarge the combustion chambers and customise the thickness of the MLS cylinder head gasket to meet the customer's requirements.

Sheet metal templates are utilised to ensure that your customised individual seal is manufactured with millimetre precision, ensuring the utmost accuracy in fit.

These customised and high-performance gaskets naturally meet the special requirements:

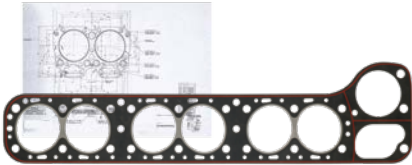

- Tailored heights and contours
- Various cylinder bore diameters
- Reinforced combustion chamber bindings, cutting or serrated rings
- Silicone coatings for the water and oil areas

Elring – quality you can rely on!

What is the procedure for custom-made products?

We can manufacture based on drawings, samples of old parts or components. Following an initial contact, a non-binding offer is prepared, which can lead to an order and the dispatch of samples.

What are sheet metal templates used for?

We manufacture sheet metal templates according to your specifications and send them to you. You can then make changes directly on the engine using the sheet metal templates, which are considered when the gasket is produced. This ensures you always receive a truly customised solution from Elring.

We look forward to your enquiry:
