

Elring – Das Original

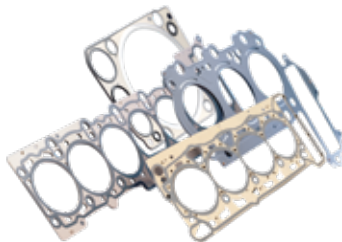

Das Original

Innovation from experience

Cylinder-head gaskets - solutions in any position.

As key components, cylinder-head gaskets contribute to efficient, safe and economical engine operation. Whether it's Metaloflex™ metal layer, metal-elastomer or metal/soft material cylinder-head gaskets - the Elring range includes all types tailored to the relevant requirements: for individually powerful, economical and environmentally-friendly engines.

Plastic parts - heat-resistant lightweights.

Thanks to the tried-and-tested ElringKlinger OE expertise, the plastic parts from Elring – Das Original provide a tailored and reliable repair solution - despite their low weight, they have sufficient rigidity to distribute the sealing load evenly. The valve covers and oil sumps are supplied ready to install and therefore ensure a time-saving, repair-orientated installation.

Gasket sets - everything complete and ready to hand.

For professional repair work, everything has to be perfectly matched, precisely coordinated and available quickly. Elring gasket sets cover a comprehensive range for full and partial inspection of both passenger car and commercial vehicle engines, transmissions and units: in line with requirements and tailored to the relevant repair. These include full sets (S), cylinder head sets (ES), conversion sets for crankcases (CS), water pump sets (WPS) and transmission sets (GSM). Saves time in ordering, storage and installation.

Cylinder-head bolt sets – for 100 % safety.

Professional cylinder head repair always requires a new cylinder head gasket and new cylinder head bolts during installation. Elring therefore not only offers the cylinder head gasket, but also the appropriate cylinder head bolt sets in tested quality. For almost all passenger cars and commercial vehicles - packaged in a special box with thread protection.

Sealants - Quality impresses at first glance.

Wherever components need to be reliably sealed, Elring offers a comprehensive range of high-performance sealants for the professional and do-it-yourself sector that has proven itself in practise.

Secondary gaskets - flexible sealing systems for all situations.

Elring offers the right special gaskets for a wide range of sealing tasks in the engine, transmission, exhaust system and auxiliary units: Gaskets for oil sumps, intake and exhaust manifolds, water pumps, compressors, turbochargers, transmissions and axles. The materials and design are optimally tailored to the relevant application and the specific requirements.

Radial shaft seals and valve shaft seals.

Dynamic seals round off the product range. Elring offers radial shaft and valve shaft sealing rings, some with a sensor, in a wide range of designs, materials and dimensions. For engines, transmissions and axles - in tested quality, of course.

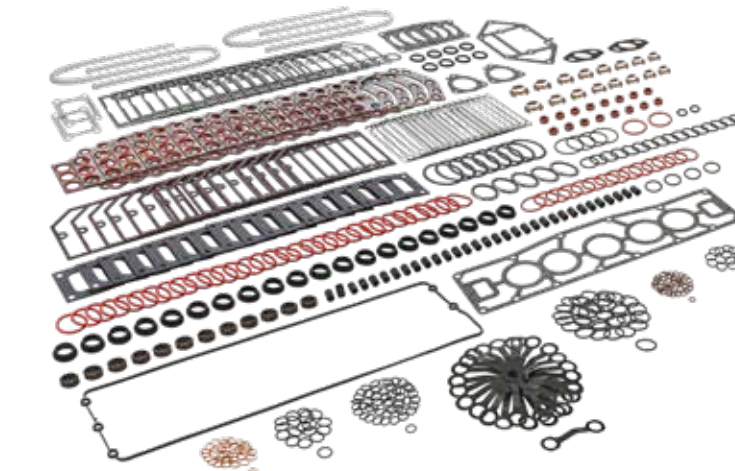

1879

Innovative strength and expertise in original equipment are the driving force for the global success of the Elring spare parts brand. It has stood for maximum safety, service and reliability since **1879**. By pooling innovative strength, we ensure individual mobility: economical, efficient and environmentally friendly.

More service.

Elring stands for fast availability and a high-performance service concept. We support our trade partners and car workshops comprehensively, for example through our technical training courses, the online training tool Elring Academy, practical assembly videos, needs-based additional information in the online catalogue, on TecDoc and ACES & PIES, monthly newsletters with topics relating to engine sealing, sealant advisers, service hotlines, exploded drawings and much more.

More safety.

You can rely on original gaskets, service parts and gasket sets from Elring for professional repairs – an accurately fitting, perfectly matched and always available. Everything from a single source.

More know-how.

Only completely reliable sealing technology ensures optimum function and performance of engines and units. Our cylinder-head gaskets are based on over a century of experience and innovation.

More product.

With a broad global product range and demand-based sets, Elring offers a comprehensive range for both full and partial overhauls of engines, transmissions and units. Whether it is complete engine assembly, the cylinder head or the crankcase. Our broad product portfolio of electric, hybrid and combustion engines is undergoing constant development - workshop professionals can rely on “Das Original”.
